

10th & 11th Tees & 16th Hole Update

Work has started on the 10th and 11th tees to improve the area and make it safer.

10th Tee

The 10th tee has been reshaped to bring it into line with the back tee. Also by doing this it will take players away from the side of the 9th green making it much safer. It will make any shots played from the left side much fairer when the flag is in the centre or back of the green.

Back of the 10th green

This area has been cleared to make it easier to maintain and fairer to the player. There have been a number of comments stating that good shots have rolled through the green and the ball has been lost. The Green Committee felt that this area should be cleared to eliminate this issue and also improve light and air flow.

11th Tee

The surplus spoil from the 10th tee has been placed at the back of the 11th tee and shaped into a new black tee. The Green Committee felt that this would toughen the hole up and also by constructing the tee would divert water flowing down to the 6th tees making the area very wet. Certain branches will also be removed therefore the 6th, 11th tees and the back of the 10th green will receive more air and light.

16th Hole

Three architects have been contacted to give their views on the ideas to improve the drainage of the 16th green and a possible change to the alignment of the hole. The Green Committee will update the membership with their recommendations.

14th December 2011.
